

Fluid Handling Solutions™

**SPRAYING PUMPING FILTERING**

All from one

# Your Prime Source for Sewage Collection

## **PACKAGED SUBMERSIBLE LIFT STATIONS FOR SEWAGE COLLECTION**

Installing the services to overcome topography and tie into existing infrastructure is a growing challenge for municipalities and developers.

Packaged systems must be flexible in their design to accommodate not only a range of flows but particularly the higher heads found in servicing smaller communities on "marginal" land previously considered unsuitable because of the excessive costs of servicing rocky terrain or land with high water tables.

Our range of packaged stations to meet medium and high head applications is designed on a modular platform to allow easy modifications to meet specific client product and control requirements.

Our high capacity Duplex Stations are fully integrated packages designed to minimize on-site coordination and ensure dependable, reliable operation.

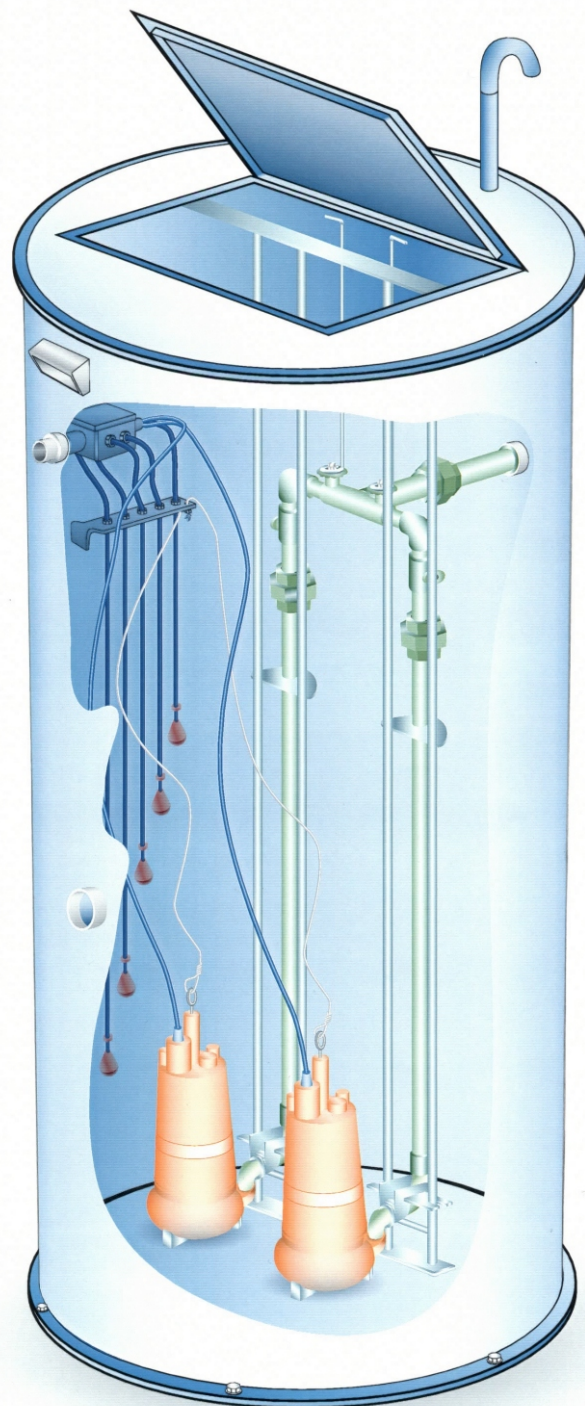

An integral or separate valve package can be incorporated.

### **Each station is a complete unit which includes:**

- duplex high flow submersible pumps
- FRP basin
- assembled slideface
- quick disconnect with galvanized steel guide rails
- assembled discharge piping
- float controls
- CSA approved pump control panel

### **Applications will include:**

- primary collection lift stations
- intermediate lift stations in a low pressure sewer systems
- small communities and multi-family applications
- schools, condominiums, golf courses, marinas
